Western Organization of Resource Councils – Gone for Good: Fracking and Water Loss in the West

http://www.worc.org/userfiles/file/Oil%20Gas%20Coalbed%20Methane/Hydraulic%20Fracturing/Gone_for_Good.pdf

Features this piece about SkyTruth’s scraping of FracFocus’s chemical database:

The non-profit organization SkyTruth has done the public a service by aggregating information from the FracFocus website. This begs an important question: Why don’t states require drillers to report to SkyTruth instead of FracFocus, at least if public access to data is their goal? State agencies should have an interest in aggregating water use data in a useful format. By handing off their responsibility for monitoring fracking water use to the oil and gas industry via FracFocus, states appear to be content simply to lend credibility to unverified data. A look at these cumulative statistics from FracFocus, as aggregated by SkyTruth, raises serious questions about their completeness.
