Press Register- While oil-soaked birds get much attention, Gulf rigs remain bright, often fatal beacons.

http://blog.al.com/live/2010/11/feds_failed_to_follow_up_on_bi_1.html (Ben Raines)

“If it’s a relatively easy fix to change the lighting on offshore structures, I’d like to know why MMS hasn’t taken any action,” said John Amos, head of SkyTruth, which monitors environmental problems using satellite imagery.

“Once again we find ourselves trailing other nations in ensuring that our offshore operations provide economic benefits while being safe for people and safe for the environment. We can do better. We should do better.”

Summit County Citizens Voice- SkyTruth report gives more details on Gulf oil spill impacts

<http://summitcountyvoice.com/2010/11/04/report-details-gulf-oil-spill-impacts/>

Bob Berwyn

“The report was compiled by the Marine Conservation Biology Institute and SkyTruth, an organization the specializes in documenting the environment from the air. [Read the full report here.](#)”

““To truly understand the full damage caused by this spill, we mustn’t forget to look offshore, in the deep waters of the Gulf, where as much as half of the oil — and most of the natural gas — that spewed from the BP well remained in the black depths, out of sight,” said geologist John Amos, founder and president of SkyTruth.”

Winnipeg Free Press- Offshore drilling standards awaited

<http://www.winnipegfreepress.com/opinion/fyi/offshore-drilling-standards-awaited-109452394.html>

John Amos, a former exploration geologist whose non-profit group SkyTruth documents oil spills by analyzing satellite images, said industry reforms should deal with more than just the specifics of what happened on the Deepwater Horizon.

"The question I have about drilling is: How many bullets have we dodged without even knowing it?" Amos said. "That's what makes me uneasy. I think there needs to be a much more systematic and broader and deeper investigation of incidents and near-incidents to answer that question."
